bit-x-bit

The advertisement features a background image of a large, yellow steel truss bridge over a river, with a city skyline in the distance under a clear blue sky. The 'bit-x-bit' logo is centered in a white circle at the top. Below it, the services 'computer forensic investigations', 'e-discovery', and 'technical expert services' are listed in white text. Further down, the text 'Endorsed by the Allegheny County Bar Association' is displayed. At the bottom, the 'NWBOC WBE CERTIFIED' logo is shown, with the tagline 'Certified Woman-Owned Business' underneath.

and e-discovery  
consulting firm**

## **e-discovery services**

The legal landscape has changed dramatically as companies and individuals rely on electronic documents and electronic communications such as email, cell phones, PDAs, and text messages. Counsel and litigants must be able to collect and review ever-increasing repositories of information that could contain relevant electronic data.

### **Early Case Evaluation**

Upfront planning not only reduces a client's overall costs, but provides a defensible position as litigation unfolds. Our early case evaluation services include identifying potentially relevant data, devising preservation strategies, and collecting and sampling potentially relevant electronic data.

### **Our E-discovery Services**

- Advise and assist with Rule 26(f) meet and confers
- Forensic capture and collection of all relevant ESI
- Prepare ESI protocols and "sample" ESI for issues relating to burden and accessibility
- Process and key word search collected ESI
- Prepare reports and affidavits in support of motions to compel, protective orders, restraining orders, and injunctive relief

E-discovery technology never stops evolving, so we closely monitor the industry in order to offer the most cost-effective and innovative solutions to our clients.

## **computer forensic investigation**

In today's digital world protecting confidential information is critical. Proprietary information can easily walk out the door on a thumb drive, or end up in a competitor's office via an employee's personal email account. All of these actions, however, leave digital "foot and finger prints" that can be exposed by a forensic investigation.

We provide comprehensive forensic investigation services to capture, interpret, and document critical relevant electronic data in these cases. An examination can reveal that an employee has improperly accessed the company's network to copy company secrets, evidence of discrimination through instant message communications, parallel versions of accounting, deletion activities and more.

Working closely with counsel and our clients, we provide the reports, affidavits, declarations, and accompanying exhibits of the digital evidence to support the claims and defenses.

## **expert, master and mediator services**

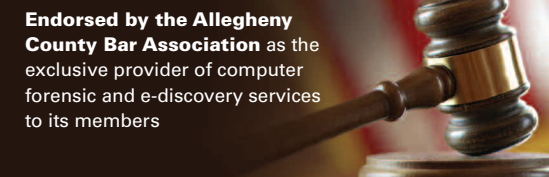

The technical nature of cases involving electronically stored information and forensic examinations requires a firm with a sophisticated understanding of the technology and legal issues involved. Our firm's unique combination of skills enables us to provide expert, third-party review, special master and mediator services for complex e-discovery and computer forensic issues.

## **hosted e-discovery review**

Our hosted e-discovery platform is powered by Sfile, an industry leader in comprehensive e-discovery hosted review systems and software. Services include early case assessment, document review and production capabilities at the lowest industry cost.

### **Key System Capabilities**

- Unlimited number of reviewers: training and access for an unlimited number of attorney reviewers
- Native format: Sfile has a universal document display platform, which means documents can be viewed in their original formats without costly file conversion to TIFFs or PDFs.
- Cloud architecture: Cloud computing architecture means that processes are spread among a number of servers, which allows for accelerated processing and great scalability of the review platform to accommodate small or large cases. One reviewer or 100, or multiple parties, Sfile seamlessly scales to project requirements.
