

Take a Look at bit-x-bit's Computer Forensic Services

Ubiquitous Nature of Digital Evidence: Every time we send an email, visit our doctor, place a phone call, walk by a video camera, leave a voice mail or perform any of the thousands of small tasks that make up our increasingly busy lives, computer systems are dispassionately creating and storing information about our activities. The objective nature of this electronic information, automatically gathered and stored, using predictable and repeatable processes, results in electronic records that offer an unassailable source of evidence when properly gathered, preserved, analyzed and interpreted.

Unmatched Experience: At bit-x-bit, we excel at analyzing and interpreting these electronic records to tell the story of the events leading up to their creation, painting a picture of how events transpired that can be understood by your legal team and the courts. Our forensic team, composed of certified computer forensic examiners and attorneys, has the experience necessary to provide you with professional and reliable results built upon a wide range forensic investigations including:

- Departing employee theft of intellectual property
- Enforcement of non-competition agreements
- Sexual harassment
- Financial fraud
- Capital murder defense
- Legal malpractice
- Bankruptcy
- Hacker incidents
- Family law matter

Expert Reporting and Documentation: We provide expert reports, affidavits, declarations and expert testimony to support our analysis and opinions. Every document we produce is carefully reviewed by an attorney familiar with the legal issues of involved in the case to ensure that our technical analysis is clear and understandable. We do not use generic automated report "templates" or include pages of meaningless "filler" data. Our reports, supporting affidavits and declarations are clear and concise with the evidence necessary to win the case.

Our Forensic Tools: In addition to our experience and expertise, we have the latest forensic hardware and software tools to preserve, gather and analyze electronic information from nearly every type of data storage system including:

- Hard drives
- Portable storage devices (thumb drives)
- Cell phones
- GPS systems
- Optical Media (CDs and DVDs)
- Social media sites
- Webmail systems
- Database systems

Value and Savings for our Clients: From cases involving the analysis of metadata associated with a single document to a forensic investigation requiring the examination of multiple systems and sources of evidence, bit-x-bit can assist with all of your forensic investigation needs. Our experts focus on the technical issues so your litigation team can focus on the legal issues, all at a value and quality that exceed client expectations, and at a cost significantly more competitive than other providers.

About bit-x-bit: Founded in 2007 by brother and sister, Scott Ardisson and Susan Ardisson, bit-x-bit provides e-discovery and computer forensic consulting services to most of Pittsburgh's major law firms, many local and national companies, as well as Duquesne University and the Office of Attorney General for the Commonwealth of Pennsylvania. Since 2008, bit-x-bit has enjoyed the Exclusive Endorsement of the Allegheny County Bar Association (ACBA) to provide computer forensic and e-discovery consulting services to the ACBA's members.
