

Take a Look at bit-x-bit's Smarter Faster ESI Processing

Smarter Solutions: Employees who are experts in e-discovery and the intelligent use of technology are at the core of bit-x-bit's smart e-discovery solutions. From the collection of electronically stored information (ESI) to its production, bit-x-bit expertly handles every phase of the litigation lifecycle. Our recently expanded e-discovery processing capacity allows us to manage cases of any size from ten gigabytes to multiple terabytes of ESI, at a cost that is consistently and significantly lower than other service providers. bit-x-bit has the capability to ingest virtually every type of electronic data for processing, and when necessary, the ability to develop customized technical solutions to handle those all too common "messy" data or problematic ESI processing issues.

Faster Processing: Utilizing distributed processing, a well-honed workflow and customized project plan, bit-x-bit can process over 15 gigabytes of ESI per hour, or nearly 150,000 electronic documents – from email to spreadsheets. This efficiency allows us to begin delivering data for attorney review with a very short turnaround time. Our ESI processing includes expert harvesting of metadata, keyword searching, sampling and testing, date filtering, and preparing load files of the resulting ESI for attorney review in any number of common (or not so common) platforms. What this means to the litigation team is that, no matter how large or complex the project, bit-x-bit can handle it.

Because we provide data in its native format, costly TIFF or PDF conversion processes are avoided. However, if you prefer to have image-based documents, we can create TIFF or PDF images at a cost that is far below the competition. Since we charge on an hourly basis, rather than on a per page or gigabyte basis, you can be assured of the highest quality and attention to detail, while enjoying prices that simply aren't available elsewhere. Our typical TIFF conversion project costs are consistently lower than even the most competitive unit-based pricing offered by other vendors.

In addition to the technical aspects of the process, we take care to maintain open communication with our clients through regular updates and reports on our progress. Our consulting services can help to address issues before they become problems, and we can steer clients with any level of expertise towards the appropriate and most sensible path. Whatever the desired result, our experienced team will be in the trenches with you, guiding you through the entire process and helping to navigate the often murky waters of the litigation lifecycle.

Value and Savings for our Clients: From a small case involving one person's data to cases involving dozens of custodians and over a terabyte of data, bit-x-bit can assist with all of your electronic discovery processing needs. Our experts focus on the technical issues so your litigation team can focus on the legal issues, all at a value and quality that exceed client expectations, and at a cost significantly more competitive than other providers.

About bit-x-bit: Founded in 2007 by brother and sister, Scott Ardisson and Susan Ardisson, bit-x-bit provides e-discovery and computer forensic consulting services to most of Pittsburgh's major law firms, many local and national companies, as well as Duquesne University and the Office of Attorney General for the Commonwealth of Pennsylvania. Since 2008, bit-x-bit has enjoyed the Exclusive Endorsement of the Allegheny County Bar Association (ACBA) to provide computer forensic and e-discovery consulting services to the ACBA's members.
