

## Catalyst and bit-x-bit Form Strategic Partnership

bit-x-bit to Deliver Continuous Active Learning and Full Spectrum E-Discovery Services through Catalyst Technology, Maximizing Cost Savings and Quality

**Denver—March 7, 2018—**[Catalyst](#) today announced its strategic partnership with [bit-x-bit](#), a national provider of e-discovery, computer forensics and cybersecurity services for some of the nation's largest corporations and law firms.

bit-x-bit will offer Catalyst's award-winning Insight E-Discovery platform to its clients, combining Catalyst's search, analytics and review technology with its complementary technical and legal expertise to deliver high-quality, cost-effective e-discovery services to its clients.

"The evolution of review technology for legal teams is moving in the direction of Catalyst," said Susan Ardisson, bit-x-bit's CEO. The company's leadership in e-discovery—including technology assisted review and its unique continuous active learning protocol—is a differentiator for our clients. Based on a thorough evaluation of a number of leading e-discovery technologies, we concluded that Catalyst is the most effective way to deliver the best economical results our clients."

bit-x-bit evaluated Catalyst for more than a year, and determined that its use case flexibility and machine learning capabilities made it the best software for managing the wide range of matters and large volumes of data and documents bit-x-bit manages. This includes major white collar investigation and criminal matters, construction litigation, complex commercial and business litigation, and investigations involving millions of documents, as well as discreet internal investigations that involve issues such as IP and trade secret theft in which clients must find patterns and facts in data quickly and efficiently.

In addition to providing expertise around delivery of Catalyst technology, bit-x-bit will use Catalyst's Insight Predict continuous active learning in its managed document review projects, as well as its integrated [Insight Legal Hold and Collect](#) software. "We get asked about legal hold a lot," added Maggie West, bit-x-bit's eDiscovery Services Manager. "How to do it to meet legal obligations, how to keep track of holds, how to preserve data, how to get to that data quickly for investigations and how to move it seamlessly to a platform for review. By partnering with Catalyst, we're solving these problems for our clients."

"We're thrilled to join forces with bit-x-bit," said TJ Gill, Catalyst vice president of sales. "bit-x-bit selected Catalyst after an exhaustive evaluation and it is a testament to the value Catalyst delivers to clients and to our history supporting service providers. Our partnership with bit-x-bit will enable them to provide their clients with superior service, control all aspects of the project lifecycle and provide tangible savings over other technology in the market."

Catalyst's Global Partner Program is a network of end-to-end technology and services that help clients lower their total cost of discovery. Catalyst and its partners work together to

integrate Catalyst's powerful web-based Insight E-discovery platform with services to deliver superior results.

### **About Catalyst**

Catalyst delivers a breadth of services and integrated technology, from legal hold through production, that enables corporations and law firms to lower legal spend and take control of complex, large-scale discovery and regulatory compliance. For more than 18 years, Catalyst has been developing the fastest and most powerful technology and has hosted thousands of matters on behalf of some of the largest companies in the world. Based in the United States, Catalyst has offices throughout Asia.
